HUDSON VALLEY ENERGY CONSULTANTS (HVEC)

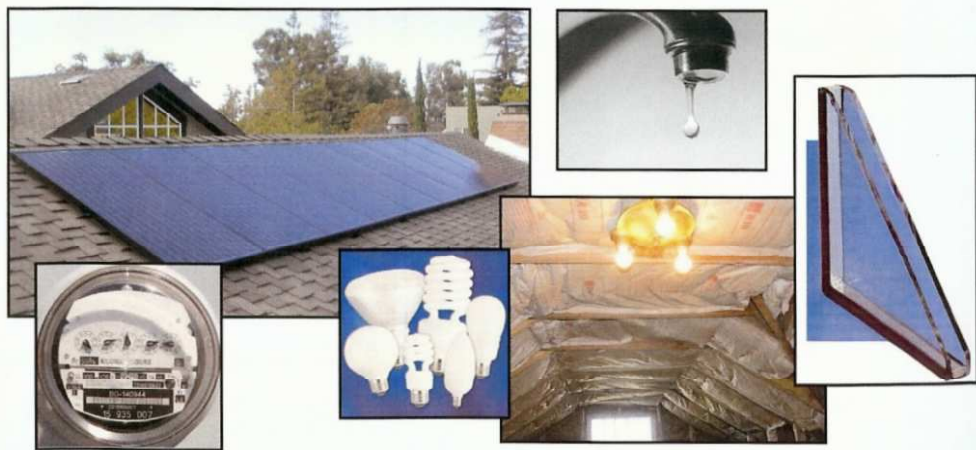

We are an independent consulting firm specializing in Energy Audits — for both residential and commercial properties in New York's Westchester, Putnam, Dutchess, Orange and Rockland counties as well as Fairfield county Connecticut.

HVEC is a *Building Performance Institute* (BPI) accredited contractor and a participating partner in the *Home Performance with Energy Star Program* sponsored by U.S. Environmental Protection Agency, the U.S. Department of Energy, and the New York State Energy Research and Development Authority (NYSERDA). We recommend that you visit GetEnergySmart.org to learn more about the programs and the benefits they have to offer.

HVEC utilizes the latest in thermal imaging technology to perform energy testing. Our energy audit technicians are trained to evaluate and make detailed cost saving recommendations at all locations. Many of the energy saving remedies can be made simply, and without spending a lot of money.

HVEC is there for you even after the audit. Our services include "after-audit" upgrade consulting. If you decide to make any of the recommended energy saving changes, HVEC will make contractor referrals, handle construction bidding, and coordinate your energy saving upgrades from start to finish.

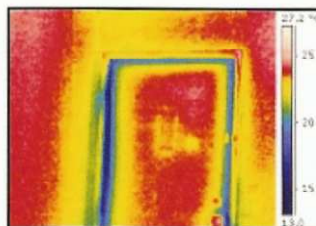

Many of these energy upgrade, home improvements may be tax deductible and these energy efficient improvements may qualify for energy rebates. All in all, your overall savings in fuel and electric consumption will be seen immediately.

HVEC FULL ENERGY AUDIT

Most audits can be completed in a single visit. A phone consultation can usually help determine the extent of your specific needs and the time needed to conduct a full audit.

We analyze doors, windows, visible insulation levels, common areas of air leakage, age and condition of heating/cooling systems, efficiency of kitchen appliances and lighting fixtures. Audits include a visual walk through, Thermal Imaging, and a written report with recommendations.

An infrared camera is used to determine large air leakage locations (drafts) and the effectiveness of insulation.

If our auditor determines there is a significant loss of heat or air leakage in the home, he may suggest a **Blower Door Test**.

After all windows and doors are closed, a fan unit is installed in a door opening which de-pressurizes the building. Outside air is pulled in replacing the air in the building — allowing the technician to measure the overall leakage in the house (how much heat is lost through cracks and holes in the house) and where the major air leaks are.

Upon completion of your audit, you'll receive a report detailing all the visual observations made by our auditor *plus* the findings of the Thermal Imaging camera. Images taken by the camera are printed out and included with your report. The report also lists approximate costs for repairs, and your approximate cost savings if you decide to make recommended upgrades.

HVEC CONSULTING SERVICES

Going the extra step... Based on our findings, HVEC consultants will make cost-saving energy upgrade recommendations. From energy efficient lighting design to energy efficient renovations, we'll manage your entire project – big or small – from bidding to building. We provide architects, engineers, contractors, and home builders for any of your upgrade needs.

HVEC Special Limited-Time Offer — Schedule your Cost-Saving Energy Audit by March 31st, and you'll save \$50.00 Off the cost of your Audit.
